

Easy search tool for architects, designers, and sculptors

The STONE FINDER by *Stone-Ideas.com* is a database where architects, designers, and sculptors can easily search for the natural stone of their choice.

The main features are:

- * it is free, both for companies presenting their stones and for users. No registration is needed;
- * only quarriers may show their stones in the database. The reason is: the stone sector is characterized by manufactures where - from quarrying to processing (and sometimes even installing) - all the steps are in one hand. This results in special confidence between the buyer and the seller – we want to strengthen this culture as it helps to compete with industries like artificial stone or ceramics.

The STONE FINDER [web page](#). More details under our [Questions & Answers](#).

We launched the STONE FINDER last summer and it is rapidly growing.

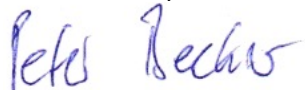

Until now, we mainly have usual marbles, granites, limestones, sandstones etc. in our database. For the future, we'd be glad to also have exotic stones, so Brazilian granites and quartzites famous for extraordinary colors and structures.

If that sounds interesting for you please send a [Mail](#) to Peter (BECKER, editor-in-chief and publisher of *Stone-Ideas.com*). We will send you the form where you can fill in the needed information. Please find below a photo of the form.

Please note: As our target group is architects, designers, and artists, it is best to show the stone how it is used at facades, in kitchens, bathrooms, or gardens. Creative people want inspirations. Yet the main picture of a presentation must be a close-up photo, of course. See examples on the [web page](#).

As *Stone-Ideas.com* has been reporting about architecture, design, and art topics for 15 years, we have strong ties to these target groups to promote the STONE FINDER. Once we have reached a „critical mass“ of entries, we will start the international promotion.
